

Geographical Information System Way of Governance

The LEADing Practice Government GIS Governance and Continuous Improvement approach is an essential part of administrating, governing what exists or in the process of getting developed/deployed as well as building in an improvement concept.

The Government GIS Governance and Continuous Improvement approach relates to the Government GIS decisions and guidance that define expectations and direction, grant power, or verify and ensure value identification and creation. It consists both of a project governance as well as a ongoing Government GIS governance.

A part of the Government GIS governance concept consists of the set of Government GIS regulatory requirements, Government GIS standards, Government Agency authority structure, Government GIS solutions, Government Agency organizational standards, Government GIS information rules and guidelines as well as Government GIS service level agreements/operating level agreements, affecting the way the Government Agencies use, administer or control information.

The Way of Government GIS Governance also includes the relationships among the many Government Agencies players involved (the stakeholders) and their specific business goals and how the changes of the Government GIS solution is improved/optimized during the Lifecycle.
